

# Product Change Notification

## Products affected:

**Part #:** OG-L2P Purifier

**Description:** Purification reagent

For use with all DNA Genotek Oragene products

**Effective date of change:** April 27th, 2011

**Customer action:** None required

## Change description:

DNA Genotek will be changing the name of the OG-L2P purifier to prepIT•L2P (REF PT-L2P) and applying a new brand treatment to the labelling. The purifier will no longer be included in the overpack box with the collection kits and will now be shipped in a separate box.

## Reason for change:

The product change is to improve customer service with respect to how DNA Genotek purification reagents are used by customers. In some cases our customers work with a 3rd party purification kit to extract nucleic acids or outsource extraction to a service provider and do not require DNA Genotek reagents. In addition, the change allows customers more convenience in shipping purification reagents directly to the laboratory that is doing the extraction for each kit order.

<b>Transition date:</b> April 27, 2011
