

## Product change notification

**Products affected:** **prepiT™-L2P** **prepiT™-Q2A**  **OMNigene™** Liquefaction reagent

**Catalog numbers/SKUs:** PT-L2P, PT-Q2A, OM-LQR-400

**Effective date of change:** January 15, 2025

### Change description:

As part of the continuous improvement process at DNA Genotek, we are transitioning our reagent protocols/instructions for use (IFU) from a printed paper format to a digital format. This change is not only environmentally friendly, but also allows us to increase the number of translations available for the protocols.

The prepiT™ and OMNigene™ Liquefaction reagent labeling will be updated to include the [www.dnagenotek.com/ed/](http://www.dnagenotek.com/ed/) URL to access the protocols.

It is possible you may receive products with the printed protocol after January 15, 2025, while existing inventory becomes depleted.

### Customer action:

No action is required. If you require a printed protocol, notify [info@dnagenotek.com](mailto:info@dnagenotek.com) to request one at any time. We will send you the IFU free of charge, within 7 calendar days of your request.
